

WALLA WALLA VALLEY

UNITED STATES

WALLA WALLA VALLEY WINE

First designated as an American Viticultural Area in 1984, the Walla Walla Valley straddles the state border: two-thirds in Washington and one-third in Oregon. Elevations soar from 400 to 2,000 feet above sea level, and the region sees minimum rainfall. The Walla Walla Valley is known for its four major soils types: cobblestone river gravels, loess, deep silts, and thin silt sprinkled over weathered basalt. Together, these different components form the unique Walla Walla Valley terroir.

Region

322,794 acres of growing area
2,933 acres of vineyards

Production

900,000+ cases produced

People

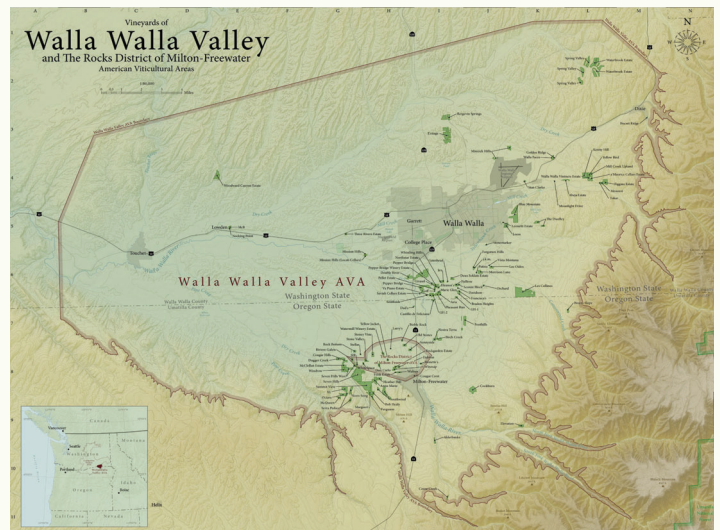

120 wineries and tasting rooms
137 vineyards

Impact

2,484 jobs (2019)
\$430 million USD annually in total economic impact
\$17.4 million USD in public revenues
