

# LIVERMORE VALLEY

## UNITED STATES

Just east of San Francisco, the Livermore Valley has an east-west orientation, making it unique among northern California winegrowing regions. It is 15 miles long (east to west), 10 miles wide (north to south), and surrounded by coastal range mountains and foothills. The east-west orientation of the valley allows the coastal fog and marine breezes to come in from the Pacific Ocean across the San Francisco Bay and cool the valley's warm air, resulting in warm days and cool nights. Soils range from limestone and gravel to clay loams. Livermore Valley's unique orientation and coastal location are expressed across various micro-climates. This topography combined with the skill of the vintners allows the region to successfully grow and produce a wide range of quality red and white wines.

### Region

1,100 hectares of growing area

50+ wineries

10+ growers

### Production

800,000 cases

### Primary Grape Varietals

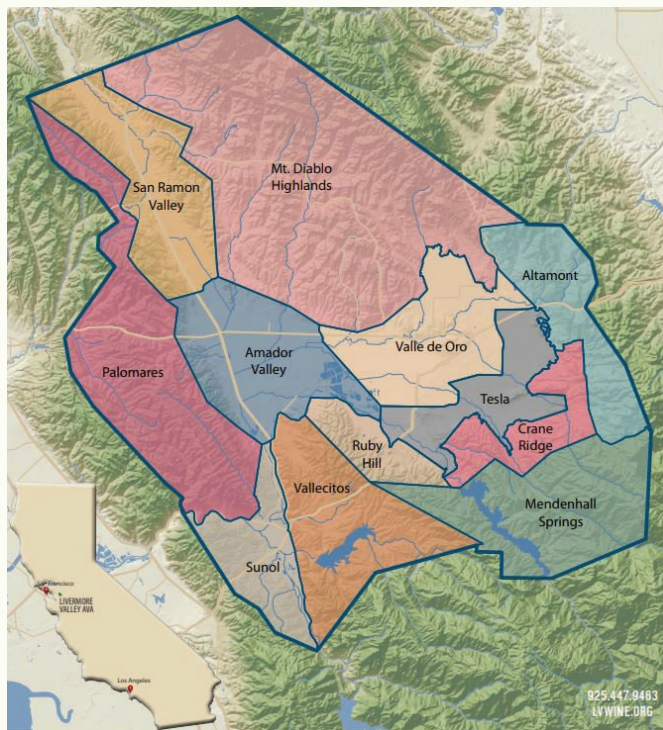

Cabernet Sauvignon

Petite Sirah

Merlot

Chardonnay

Sauvignon Blanc
